

Integra

SAF Tehnika – the pioneer of compact full outdoor microwave radio technology – is excited to make a step forward in the evolution of full outdoor packet microwave radio systems. Integra is an unbelievably light, energy efficient carrier-grade system that exemplifies an outstanding return on smart engineering – the synergy of high competence in radio electronics and materials science. Integration of next generation microwave radio with high and super high performance antennas into a single unit translates into a lower total cost of ownership, as well as less time spent on the installation site, and better reliability of the link even in densely served areas.

Perfect for small-cell, RAN, and HetNet backhaul where aesthetics in a metropolitan area are a key concern, Integra delivers ambitious performance in a compact package never before available in licensed microwave backhaul. Integra's embedded software takes full advantage of its cutting edge network processor providing SyncE and 1588v2 PTP support for LTE network builds, Layer 2 header compression and 256-bit AES encryption for public safety, government, and enterprise networks. Thanks to a convenient design and its solid functionality the Integra is an industry-unique, right-out-of-the-box microwave system with a superior radiation pattern and payload capacity of up to 474 Mbps per channel/polarization.

Integra – by its form and specification – is a proper building block for a variety of modern wireless networking applications. To stay advanced and competitive in the telecom world that will increasingly depend on seamless integration and interoperability of synchronization-sensitive systems, it is smart to invest in technology that takes the right direction. The concept of Integra is on that path.

Technical specification

General			
Concept / form factor	FODU and antenna integration		
Capacity	Up to 456 Mbps payload full duplex at 56MHz 1024QAM, Up to 474 Mbps payload full duplex at 60MHz 1024QAM, Up to 948 Mbps payload full duplex in 2+0 60MHz configuration, <i>up to 1Gbps throughput with header compression*</i>		
Frequency bands	15GHz, 17GHz UL, 18GHz, 23GHz, 24GHz UL, 38GHz, 42GHz <i>and more*</i>		
Modulation	From 4QAM up to 1024QAM with hitless ACM		
Channel bandwidth	ETSI: from 3.5 MHz up to 56MHz FCC: from 5 MHz up to 60MHz		
Integrated antenna			
Sizes	0.2m / 2/3ft	0.3m / 1ft	0.6m / 2ft
Antenna	High Performance and <i>Super High Performance*</i>		
Ports			
Gigabit Ethernet	1x RJx45	Electrical with built-in PoE splitter	
	2x SFP	Fiber Optics	
Service ports	3.5mm	Audible alignment and RSSI	
	USB B	Terminal Access	
	LED	Power On, Link Synchronization, RSL	
Ethernet			
Ethernet	Built-in Carrier Ethernet Gigabit Network Processor		
Managed Gigabit Switch functionality	802.1Q VLANs with QoS including WRED, shaping and DWRR Spanning Tree Protocol, Jumbo frames <i>and more*</i>		
Management	SNMP v1/2c/3, SSH, HTTPS, Serial, Radius, Network Time Protocol		
Synchronization	SyncE, <i>IEEE 1588v2 PTP*</i>		
Carrier Ethernet functionality	Provider Bridging, MEF9&14, High Efficiency Header Compression, AES 256-bit encryption, <i>MPLS-TP*, OAM*</i>		
Max frame size	9600 bytes		
Electrical & Mechanical			
Power consumption	Typical: 20W, Max: <35W		
Size, 0.6m / 2ft, w/o mount	669 x 669 x 289 mm / 26.3" x 26.3" x 11.4"		
Size, 0.3m / 1ft, w/o mount	378 x 378 x 227 mm / 14.9" x 14.9" x 9"		
Mount size, max	292 x 176 x 250 mm / 11.5" x 7" x 10" max		
Supported pole size	Ø 40 – 120 mm / Ø 1.6" – 4.7"		
Temperature range	-33 ... +55 °C / -28 ... +130 °F		
Weight, 0.6m w/o mount	5 kg / 11 lbs		
Weight, 0.3m w/o mount	5 kg / 11 lbs		
Weight, mount	2.55 kg / 5.6 lbs

Ethernet header compression

Example shows that in 60MHz channel and 1024QAM modulation over 1Gbps throughput can be achieved with Ethernet header compression of frame size of 64 bytes in 1+0 configuration, where link capacity is 465 Mbps:

Frame size, bytes	Ethernet, Mbps	Throughput gain, %
64	1069.50	56.52
128	715.88	35.14
256	572.95	18.84
512	515.38	9.77
1024	489.38	4.98
1280	484.38	4.00
1518	481.27	3.38

Table shows maximum improvement achieved, when compressing IP header, QinQ VLANs headers, MAC addresses and Ethernet L1 overhead. Ethernet throughput for each frame size can be calculated for any link capacity by using calculated gain from the table. For example, at 465 Mbps radio capacity with Ethernet compression gain of 56.52% of 64 byte size packets can achieve 1069 Mbps Ethernet throughput, i.e. $465 \text{ Mbps} / (1 - 56.52\%) = 1069 \text{ Mbps}$.
