

LIFESTYLE PRODUCTS APPROVED BY DOGS

- Rinse/flush the entire Pup-Grass® area with a water hose / sprinkler system to control odor and push urine through the drainage system.
- This should be done on a regular basis. Use a leaf blower to remove debris (leaves, sticks, etc)
- For optimum odor control, we recommend using All Natural Pup-Fresh™ Odor Controlling Granules. Pup-Fresh™ is also used as an infill and will keep the blades from matting down.
- You can also use a bacterial enzyme product like Pup-Zymes™ to eliminate odors. The turf fibers themselves have anti-microbial properties, which will reduce odor. However, topical spray will help re-enforce odor and bacteria control.
- Clean up spills as they occur or found by flushing with water. Use a mild detergent and flush with clean water. If necessary, remove the Pup-Fresh™ infill with a shop vacuum, clean turf as above, and replace with new infill.
- Debris should be removed regularly. Broom regularly with a stiff shop broom to revitalize the fiber (and keep the infill level, if applicable). Apply infill, if necessary, with drop spreader and broom to level
- Most cleaning agents will not harm the fiber. However, we do not recommend harsh chemicals since they may damage the backing.
