

Healthcare company introduces new family of Waterproof Keyboards at the HIMSS show in Chicago, IL (Booth #6019)

Jacksonville, FL April 7, 2009 – Seal Shield LLC today announced the Medical Grade family of Washable Keyboards. Computer keyboards have been shown to be a major source of bacteria and viruses in hospitals and other shared work environments. According to Dr. Charles Gerba, University of Arizona, "the average keyboard harbors 400 times more bacteria than the average toilet seat."

The Medical Grade Keyboards from SEAL SHIELD are easy to clean. They are manufactured with SEAL SKIN high grade silicone which is 100% latex free and resistant to contamination. Unlike other keyboards, the SEAL SHIELD Medical Grade Keyboards are fully submersible and manufactured to IP-68 specifications. They can be disinfected with

healthcare grade sprays and wipes or washed in a sink or dishwasher. Regular cleaning can help prevent the spread of germs, viruses, bacteria and fungi which are known to harbor on frequently touched surfaces.

The SEAL SHIELD Medical Grade family of keyboards includes several diverse models for varied applications. The new SEAL GLOW keyboard features a soft blue backlight, ideal for dark conditions, while the SEAL GLOW TOUCH (pictured above) incorporates a touchpad for an All-In-One solution. Other new All-In-One solutions include the SEAL TOUCH Keyboard with touchpad and SEAL PUP Mini Keyboard with SEAL POINT pointing device. All of the new Medical Grade Keyboards from SEAL SHIELD feature the company's exclusive QUICK CONNECT feature which allows the keyboards to be easily disconnected for cleaning. The SEAL TOUCH and SEAL PUP keyboards feature the addition of SILVER SEAL Protection.

SILVER SEAL Protection is an antimicrobial additive which protects the products from mold, mildew and microbial bacteria. Unlike many antibacterial products, SILVER SEAL utilizes natural, pure silver ions which are embedded in the high grade SEAL SKIN silicone to create a safe, effective, inorganic, antimicrobial solution. SILVER SEAL Protection has been shown to safely inhibit microbial growth and reduce the spread of odor causing bacteria.

"The new Medical Grade family of keyboards makes Seal Shield a one-stop source for all infection control input device needs in healthcare organizations worldwide, regardless of the application," states Seal Shield CEO, Brad Witchurch. "Our Patent Pending technology and industry leading R&D allows Seal Shield to offer the most complete, effective and economical solutions for hospital infection control."

About Seal Shield LLC:

Seal Shield designs, develops and manufactures medical grade washable computer keyboards, mice and TV remote controls for the international healthcare industry and consumer electronics markets. The products are distributed internationally by CDW, Corporate Express, DELL, Insight, PC Connection and other reseller and retail partners.
